Setup

Navigate to root:

```
import sys, os
from pathlib import Path

_project_root = Path.cwd()
while not (_project_root / "src").exists():
    _project_root = _project_root.parent
os.chdir(_project_root)
```

Imports

```
## std lib
from pathlib import Path
from itertools import product

## 3rd p lib
from IPython.display import display
import numpy as np
import matplotlib.pyplot as plt

# project code
from src.config_parser import load_config
from src.viz import viz_sim
```
